dcoxshall.github.io | dacoxxshall@gmail.com | linkedin.com/in/dylan-coxshall-3b4695207

BSc Computer Science at the University of Birmingham, with a year in industry as a safety critical software engineering placement student at GE Aerospace, Cheltenham. Certified Engineering Technician by the Institute of Engineering and Technology.

Top Skills

- Safety-critical software engineering in C. Also fluent in C++, Python, Java and Rust.
- Experience in Windows and Linux development environments. Experience with the cloud using Hetzner's cloud hosting service.
- General software development tools – Git and GitHub, and CI/CD using GitLab.
- Embedded software tools and requirements engineering – TRACE32, IBM's Rational DOORS (previously Dimensions), IBM's Engineering Workflow Management.

Certifications

EngTech – IET

Engineering Technician (Referred to as EngTech) is the IET's entry-level engineering qualification, awarded for demonstrating practical problem solving in a laboratory environment. I earned EngTech by testing software I'd written in a low-voltage electronics lab on-site at GE Aerospace, which is where I studied for and completed the certification.

Experience

GE Aerospace, Cheltenham, Gloucestershire, UK (On site)

Software Engineering Placement Student

June 2024 – July 2025

- Contributed to the secondary power distribution system for a flagship GE Aerospace product, developing, testing, and reviewing safety-critical embedded C code.
- Authored and reviewed software requirements, ensuring compliance with high code quality standards in a safety-critical environment.
- Organised global educational calls with executives and HR leaders as part of the GE Placement Committee, supporting peer development and engagement.
- Led STEM outreach events and earned EngTech qualification.

Data Annotation (Remote, part time)

Data Annotator

January 2023 – November 2023

Wrote specialized input for machine learning models to train from. This included writing code in Python, C and C++ to solve intermediate software engineering problems (including writing automated tests), as well as performing elementary data analysis using Python and Excel.

Camp Moosilauke, New Hampshire, US

Canoe Instructor/Camp Counsellor/Lifeguard

June 2023 – August 2023

Worked abroad in New Hampshire teaching young people to canoe. This involved becoming a Red Cross certified lifeguard, working with young people and other counsellors, and arranging off-site white water canoe trips with senior counsellors and young people.

Personal Projects

dylstatus – A simple status-bar generator for the i3 Window Manager

Dylstatus is a replacement for i3status, and is designed to provide system information to the user on the desktop. Writing dylstatus was my first exposure to interacting with an external API (i3bar Input Protocol) and provided invaluable experience in software engineering.

chesslib – A fast chess move generation library and engine, written in C.

chesslib is a C library to generate legal chess moves quickly. It will eventually be a full-fledged chess engine, but is currently in the early stages of development.

Education

BSc Computer Science with Year in Industry, University of Birmingham, UK. Graduating in 2026 (Predicted First Class). Relevant optional modules taken include Dependable and Distributed Systems, Advanced Networking, and Advanced Cryptography.
